

Autonomous Sensor Buoy — Deployment, Calibration & Maintenance Log

Protocol ID: schmidt_2018 *Print on waterproof paper. This log records the buoy — the water-quality data live in the sensor CSVs.*

Deployment

Site name / ID	Coordinates (lat / lon)	Deployment date	Personnel

1 • Sensor inventory & configuration (record at deployment)

Sensor	Model / ID	Depth (m)	Logging interval	Factory-cal?	Notes
Temperature 1					
Temperature 2					
Temperature 3					
Conductivity / salinity					
Pressure / level					
Dissolved oxygen					

2 • Dissolved-oxygen calibration log

DO calibration date	100%-sat step done	0%-sat step done	Operator	Notes

3 • Maintenance / offload visit log (one row per visit)

Visit date	Offload (file / size)	Cleaned?	Battery OK?	Reference reading (instr; T / Sal / DO)	Orientation (pressure OK / tangled)	Notes

Reference readings feed the sensor-validation (RMSE / bias) sheet of the stats workbook. QC standard used: _____ · conductivity → salinity method: _____ · ID-tag contact on string: _____
